The Optimal Loop Excision Still Requires FINESSE®

Introducing the new FINESSE+ SYSTEM
To help prevent skin burns to patients during electrosurgical procedures, the global electrosurgical safety standard mandates a 6°C limit on temperature rise beneath a dispersive pad. Thermography tests certify that the FINESSE+ and FINESSE II+ systems safely shut down output well before pad site burns can occur. The top image shows a maximum temperature rise of 2.2°C for a fully attached dispersive pad. As the pad peels laterally away from the patient’s skin, the FinCQM system will detect an error condition. In the most extreme condition allowed by FinCQM, the maximum temperature rise detected is 4.4°C (center image). Without FinCQM (bottom), continued pad separation results in significant skin heating, which likely causes a serious patient burn.

**Controlled Output Circuitry+**

Utah Medical Products, Inc’s (UTMD’s) electrosurgical experience and research into tissue effects during loop electrosurgery have resulted in an upgrade to system design. FINESSE+ and FINESSE II+ incorporate Controlled Output Circuitry+ to produce a tissue specimen for conclusive histopathology. Controlled Output Circuitry+ is UTMD’s advancement of “intelligent cut” circuitry that maintains the output within a prescribed cutting range by continuously monitoring and adjusting the output to produce a specimen with minimal thermal damage at the margins. This also eliminates any need to adjust the output setting when changing loop sizes.

Controlled Output Circuitry+ is a three-tier output delivery and monitoring approach:

- **Tier 1**: A microprocessor and specialized electronics continuously monitor the output, adjusting for smooth, char-free cutting.
- **Tier 2**: The microprocessor compares the output to mathematically-defined reference curves, and further adjusts the output as necessary to ensure that safe output levels are maintained.
- **Tier 3**: In the event that output cannot be adjusted to satisfy the reference curves, output is disabled and an error is displayed.

**Integrated Smoke Evacuation**

The FINESSE+ and FINESSE II+ Systems utilize a design that integrates the electrosurgical generator and smoke evacuation system into a single compact unit. This allows placement in operating areas with limited space. It also allows simultaneous “single switch” activation of both modules by either the handswitch control pen or footswitch.

FINESSE+ and FINESSE II+ use a three-stage filtration system to evacuate and filter the smoke plume produced during electrosurgery. The filtration system includes an activated charcoal filter which adsorbs odorous gases, and two high-efficiency particulate filters which remove solid particles and aerosols, particularly helpful for smaller offices. The system has a minimum efficiency of 99.999% for 0.1 micron particles.

**Dispersive Pad Contact Quality Monitoring (FinCQM™)**

UTMD’s FinCQM circuit design adjusts to skin type variations and was validated to detect partial pad detachment before a pad site burn can occur. Output is automatically disabled and an error is displayed with separation of approximately 30% of the pad surface.

**Enhanced Logic Integration**

Output waveforms and a majority of logic functions are hard-coded into a microprocessor-linked complex programmable logic device (CPLD). Reliability of the FINESSE+ and FINESSE II+ systems is enhanced by minimizing component usage.
**FINESSE+**

Finesse+ is a versatile electrosurgical system with variable output and mode controls. Finesse+ provides excellent clinical results for a broad range of procedures, but still excels at yielding the best possible results for LETZ excisions.

**Voltage Option:** 115 VAC* 230 VAC**

FIN-110  FIN-220

---

**FINESSE II+**

Finesse II+ is designed to provide intact cervical specimens with clean margins, allowing conclusive histopathology results for LETZ. There are no front panel adjustments necessary, making Finesse II+ operation as effective as possible.

**Voltage Option:** 115 VAC* 230 VAC**

FIN2-110  FIN2-220

---

**AND MORE...**

Selection of a Finesse+ or Finesse II+ system is a wise long-term investment:

- UTMD’s Finesse systems have been known for excellent longevity.
- Extended warranty program covers all service, maintenance and the free use of loaner systems.

COMMON SPECIFICATIONS

Dimensions: 14.0” W x 14.7” D x 7.3” H, 24 lbs. (35.6cm x 37.3cm x 18.5cm, 11 kg)

Error Indicators and Safety Interlocks:
- CQM System: Unacceptable pad peel, Pad contact out of range
- Pad Status: Pad not connected to system, Pad type mismatch
- Output Monitor: Hazardous output power limit, Output current limiting circuit
- Cross-Key: Simultaneous Cut/Coag activation
- Mode Change: Mode change during activation (FINESSE+)
- Power Adjust: Control lockout during activation (FINESSE+)

Finesse+

Electrical Output:
- Frequency: 450kHz
- Cut/Blend Power: 6-99 Watts @ 500 Ohm load
- Cut Mode: Continuous Sinusoid
- Blend 1 Mode: Interrupted Sinusoid, 62.5% Duty Cycle
- Blend 2 Mode: Interrupted Sinusoid, 50% Duty Cycle
- Blend 3 Mode: Interrupted Sinusoid, 37.5% Duty Cycle
- Coag Power: 6-75 Watts @ 500 Ohm load
- Coag Voltage: 2,400 Volts zero-to-peak max (open circuit)

Smoke Evacuation:
- Flow Rate: Normal >70 liters/min (2.5 CFM), High >100 liters/min (3.5 CFM)
- Efficiency: >99.999% at 0.1 microns

Finesse II+

Electrical Output:
- Frequency: 450kHz
- Cut Power: 65 Watts @ 500 Ohm load
- Cut Mode: Blended Cut
- Blend 1 Mode: Interrupted Sinusoid, 62.5% Duty Cycle
- Blend 2 Mode: Interrupted Sinusoid, 50% Duty Cycle
- Blend 3 Mode: Interrupted Sinusoid, 37.5% Duty Cycle
- Coag Power: 60 Watts @ 500 Ohm load
- Coag Voltage: 2,180 Volts zero-to-peak max (open circuit)

Smoke Evacuation:
- Flow Rate: >80 liters/min (2.8 CFM)
- Efficiency: >99.999% at 0.1 microns

Dispersive Pads:
- Compatible Types: Auto-detects and displays pad type: Dual (CQM) or Standard
- CQM Circuit: Initial threshold detect, with threshold auto-adjust with improved contact. 10-130 ohms operating range

Activation: Handswitch, Footswitch

Standards Compliance:
- IEC 60601-1 (3rd ed) + 60601-2-2 (5th ed) (electromedical safety)
- IEC 60601-1-2 (electromagnetic compatibility)
- 230 VAC systems comply with 93/42/EEC + 2007/47/EC (EU Medical Device Directive) and are CE Marked
